OVERHAULING ECONOMIC THEORY [HTTP://WWW.DEBTDEFLATION.COM/BLOGS/DEBUNKING-ECONOMICS/](http://www.debtdeflation.com/blogs/debunking-economics/)

- Mainstream Economic Theory

- Static (Equilibrium)
- Does not understand that bank loans create money (e.g. home equity loans)
- Does not predict economic cycles (booms and busts)

- Steve Keen's Theory

- Dynamic
- Does understand that banks create money
- Predicts economic cycles

Predicted the Crash before it happened, 2005

- Massive private debt is the problem, even more so than the government debt
- The trend was unsustainable
- The crash occurred when private creation of money contracted

Nasdaq crashes

Dalbar Study

Morningstar study

The impact of rising and falling stock prices on investor behavior

Sources: Index data — Standard & Poor's; equity flows data — Strategic Insight, based on flows into domestic/international equity funds and ETFs.

DALBAR Quantitative Analysis of Investor Behavior

Ending values and average annual total returns of hypothetical \$100,000 initial investments for 20 years ended 12/31/10

Source: DALBAR (average equity and fixed-income investors data). DALBAR uses data from the Investment Company Institute, Standard & Poor's and Barclays Capital index products to compare mutual fund investor behavior with an appropriate set of benchmarks. These behaviors are then used to simulate the "average investor." Hypothetical equity and fixed-income investor investments are based on average annual total returns. The indexes are unmanaged, and their results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or taxes.

Is it possible to outperform the S&P 500?

Yes

AAII Strategies

The screenshot shows the AAII website's 'Stock Screens' page. At the top, there's a navigation bar with links like 'Home', 'Benefits', 'AAII Journal', 'Getting Started', 'Financial Planning', 'Investing', 'Model Portfolios', 'Stock Screens', 'Discuss', 'Chapters', 'Conference', 'Level3 Book', and 'Store'. Below this is a search bar and a breadcrumb trail: 'Guide to Stock Screening > Performance History > Risk & Return > Screen Characteristics > Disclaimer'. The main heading is 'Stock Screens', followed by a paragraph explaining the purpose of the screen area. To the right, a 'Site Highlights' box contains links to 'Screen Snapshots', 'Monthly Performance', 'Getting Started', 'Constructing Winning Stock Screens', '2016 Year-End Screening Review', and 'FAQ'. A red note states: 'NOTE: The next update, with 4/30/17 data, will take place on 5/15/17.' Below this is a table of 'Screen Performance Snapshots' with tabs for 'YTD', '3-Year', '5-Year', '10-Year', 'Inception', 'Risk Index', 'Category', and 'Alphabetical'. The table lists three strategies: Fisher (Philip), Driehaus, and O'Neil's CAN SLIM Revised 3rd Edition.

» [Printer-friendly](#)

How often have you heard of a stock price falling on the announcement of increased earnings? Or, in these times, an Internet stock leaping up after reporting negative earnings per share? In these instances, actual earnings did not turn out as expected. And, like the presidential primaries, expectations play a key role in determining if a stock's price "gains" or "loses" when actual earnings are reported.

Investors quickly learn that the market is forward-looking. Security prices are established through expectations, and prices change as these expectations change or are proven incorrect. In the last 10 years, we have seen a significant increase in the services that track and analyze expected earnings per share estimates.

Performance History

Before following any AAII stock screen, we recommend that you look at the long-term returns as well as recent performance. Understand that the screen portfolios that we present are merely computer-generated lists, based on our own interpretation of popular investment approaches.

That being said, our screen tracking results are quite impressive. Complete performance statistics are listed in the table below.

Note: Click on the column headers to sort by specific year. Definitions of Price Change and Monthly Variability are available by clicking on the question mark icons.

Details

Rebalancing period is Monthly

- Large amount of fees
 - 20 stocks * \$7*12months/year = \$1680/year
- FolioFN <https://www.folioinvesting.com/folioinvesting/home/>
\$290/yr
 - Up to 2000 Window trades per month at no cost per trade

Easy for Tax-deferred accounts (IRAs)

Lots of accounting for Taxable accounts

Actually much more practical than we would normally think

- I am doing weekly rebalancing!

What is the **Piotroski F-Score**

The [Piotroski F-Score](#) was developed by [Joseph D. Piotroski](#)

In 2000, he wrote a research paper called "[Value Investing: The Use of Historical Financial Statement Information to Separate Winners from Losers](#)" (pdf).

measure firm-specific returns as **one-year** (two-year) buy-and-hold returns

All firms in the high BM universe (20% highest = 20% lowest price to book) have a market adjusted return of 5.9%

High Fscore (F8 and F9) have a market adjusted return 13.4% which is 7.5% better than the 5.9% (All firms in the high BM universe)

*This is **13.4% better than the Universe of all stocks***

[http://www.aaii.com/journal/article/adjusting-for-the-real-world-testing-variations-of-piotroskis-screen?
of=4566e312/0763668d/323c2e4787f2b0c6ba912110ca07f41b7d0b0ad21cca0766a31eac0a221d83b45114658c/ed0b3b7880ca163845d05d408d130e46d0769](http://www.aaii.com/journal/article/adjusting-for-the-real-world-testing-variations-of-piotroskis-screen?of=4566e312/0763668d/323c2e4787f2b0c6ba912110ca07f41b7d0b0ad21cca0766a31eac0a221d83b45114658c/ed0b3b7880ca163845d05d408d130e46d0769)

“Piotroski’s selection strategy looks like a winner, but it is hardly an investable strategy in the real world.”

But it can be.

Backtesting the AAI Estimate Revisions Stock Screen

January 21, 2017

<http://www.aai.com/computerizedinvesting/article/backtesting-a-stock-screen-to-improve-your-results?a=email01212017>

Slippage

an investor would be fortunate to incur a cost of only 25 basis points (0.25%) for a round trip (sell-and-buy) transaction at this level of liquidity. Fifty basis points (0.5%) could very well be more reasonable. For this screen, traded monthly, trading costs could result in a 3% to 7% reduction in the compound annual growth rate (CAGR), certainly a significant amount.

this screen is relatively robust to starting dates.

- #2 enforces a liquidity check, specifically that a stock has traded at least \$500,000 per day over the last month. This term is added to all screens to ensure that the stocks are purchasable at a reasonable cost and in reasonable volume. Note that the AAll “Top 30 Up” screen does not have a specific liquidity check.
- One rule of thumb is that purchases should be limited to no more than 1% of daily trading volume so as to not cause undue pricing pressure on the stocks being purchased. In this case, this states that not more than \$5,000 of any stock should be purchased, resulting in a portfolio size limited to \$150,000 (30 stocks x \$5,000 per stock). This size portfolio is adequate to meet many individual investors’ needs.

SHOWS THE RESULTS WHEN VARYING LEVELS OF TRADING COSTS (**FIGURE 3**, #2) ARE INCLUDED IN THE BACKTEST.

Column1	CAGR, Zero trading cost	Avg. Turnov	CAGR, 25 BP R/T Cost	CAGR, 50 BP R/T Cost	CAGR, 100 BP R/T Cost
Screen - Weekly	37.81%	43%	30.03%	23.23%	10.17%
Screen- 2 Weeks	31.08%	67%	25.27%	20.12%	10.06%
Screen- 4 Weeks	23.94%	95%	19.95%	16.40%	9.33%
Screen- 8 Weeks	18.53%	95%	16.62%	14.88%	11.34%
Screen- 13 Weeks	12.30%	91%	11.23%	10.25%	8.23%
Screen - Yearly	8.76%	89%	8.49%	8.25%	7.74%
S&P 500 Eq Weight	6.92%	--	6.92%	6.92%	6.92%

As shown in **Figure 8**, the 37.8% CAGR hoped for by trading weekly quickly turns into something much lower depending on the trading costs incurred.

FIGURE 9: VARYING NUMBER OF STOCKS HELD

# Stocks Held	Ttl						Correl				
	Return	CAGR	Drawdown	Sharpe	Sortino	StdDev	Bench	R-Square	Beta	Alpha

S&P 500 Eq Weight	204.21%	6.91%	-60.83%	0.37	0.52	20.60%	-	-	-	-	

Most strategies perform best with a small number of stocks, typically 5 to 15, unlike the hundreds of stocks usually held by a mutual fund or ETF

<https://www.portfolio123.com> for fast,
easy and powerful back testing

It is not cheap 99\$/month

- Al Z has been using it for years
- I just started in April 2017

(35\$/month plan, but not for serious work)
